

Toph, the First Metalbender

Naya land-creature combat deck — Bracket 3 — how to actually play it

"Nontoken artifacts you control are lands in addition to their other types. (They don't gain the ability to {T} for mana.) At the beginning of your end step, earthbend 2."

The one sentence version

Your commander turns your artifacts into lands, and earthbend turns lands into creatures. So your mana base is your army, your artifacts are your mana base, and both of them grow every single end step for free. **Nothing else in the deck matters until Toph resolves** — deploy her turn 3 or 4, every game.

Earthbend, exactly

"Earthbend N": Target land you control becomes a 0/0 land creature with haste in addition to its other types. Put N +1/+1 counters on it. When it dies or is exiled, return it to the battlefield tapped under your control.

- **Haste is automatic.** Without it an animated land could not tap for mana, attack, or be sacrificed the turn you animate it.
- **No duration.** An earthbent land stays a creature permanently.
- **It grants the land type itself.** This is the important one: an artifact you have already earthbent stays a land creature even if Toph dies. Spend your early earthbends on artifacts, not on real lands — your real lands are already lands.
- **It returns from graveyard or exile ONLY.** Bounce and tuck are permanent losses, earthbent or not.
- **Sacrificing counts as dying,** which is what makes Zuran Orb an engine instead of a lifegain card.
- **Earthbends stack.** Counters accumulate; the base 0/0 reset is a no-op after the first.
- It does not give the land a colour, and it does not remove abilities — an earthbent Ornithopter still flies.

MDFC trap. Bala Ged Sanctuary has only its front face in the graveyard, and that face is a Sorcery. A sorcery cannot be put onto the battlefield, so earthbend's return does nothing for it. **Never feed a modal double-faced land to Zuran Orb.**

What Toph does and does not trigger

- **Nontoken artifacts entering DO trigger landfall,** because the type change applies as they enter. Casting one does not use your land drop.
- **A permanent already on the battlefield becoming a land triggers nothing.** When Toph resolves and converts your existing artifacts, you get no landfall burst. Same when Gift of Immortality returns her.
- **The parenthetical is reminder text.** Artifacts can gain mana abilities from elsewhere — Chromatic Lantern and Great Divide Guide both grant them to lands, and your artifacts are lands.
- **Tokens are never lands:** Clues, Treasures, Food, Cats, Beasts, Plants, Spiders, Insects, Constructs.

The fetch package — six fetches, seven landfall payoffs

Every fetch is two landfall triggers: once when the fetch itself enters, once when the land it finds enters. That is why a fetch beats a basic in this deck, and why you never cut one for a basic.

Fetch	The fetch itself	The land it finds
Arid Mesa	enters untapped	untapped
Prismatic Vista	enters untapped	untapped
Windswept Heath	enters untapped	untapped
Wooded Foothills	enters untapped	untapped
Grasslands	enters tapped	untapped
Mountain Valley	enters tapped	untapped

Grasslands and Mountain Valley are the ones that get misread. The land itself enters tapped, but what it *fetches* comes in untapped — their search text has no tapped clause. Slower to deploy, not slower to pay off.

Seven landfall payoffs see both triggers: Avenger of Zendikar, Evolution Sage, Felidar Retreat, Lotus Cobra, Rampaging Baloths, Scute Swarm, and Toph, Earthbending Master.

Traveling Chocobo doubles both halves. Its text: *"If a land or Bird you control entering the battlefield causes a triggered ability of a permanent you control to trigger, that ability triggers an additional time."* Each of the two landfall events becomes two, so **one fetch is four landfall triggers**. With Scute Swarm out at six or more lands, every one of those four makes a *copy of Scute Swarm* — a single fetch is four new Swarms.

Only 6 of your 16 artifacts make mana

Sol Ring, Arcane Signet, The Mind Stone, Chromatic Lantern, Thran Dynamo, Twitching Doll. The other ten are lands for landfall and earthbend purposes only. **Chromatic Lantern and Great Divide Guide are the highest-leverage permanents in the deck** because they turn that whole pile into real mana.

Getting more than one earthbend a turn

Toph gives you earthbend 2 at your end step. That is the floor, not the ceiling.

Only two cards multiply Toph's end step

Card	What it does
Annie Joins Up	If a triggered ability of a legendary creature you control triggers, it triggers an additional time. Free, automatic, every turn. Also deals 5 damage to a creature on entry.
Strionic Resonator	{2}, {T}: copy a triggered ability already on the stack. Once per turn cycle.

Both out is **earthbend 2 three separate times**, each with its own target. They are separate instances, not one earthbend 6. Total counters come out the same either way because your boosters apply per event — the choice is bodies versus size. Two medium land creatures beat one big one most turns, because Toski and Ohran Frostfang draw per creature that connects.

Using Strionic Resonator correctly

1. **Beginning of your end step.** Toph's ability triggers and you choose its target land now.
2. **Hold priority.** Activate the Resonator, targeting that trigger on the stack.

3. The copy resolves first with a new target, then the original resolves.

You cannot pre-activate it — the trigger must already be on the stack. That means holding up {2} through your whole turn, which competes directly with The Stasis Coffin's {2}.

Annie doubles more than the commander

Every legendary creature you control: Toph Hardheaded Teacher (earthbend 2 per spell cast instead of 1), Toph Earthbending Master, Toph Greatest Earthbender, Avatar Kyoshi and Bumi Unleashed.

Two cards that look like they should double Toph and do not

Traveling Chocobo only fires when a land or Bird enters. Toph's end step trigger is not caused by a land entering, so Chocobo never touches it. Chocobo doubles your landfall package only — which, as above, is still a great deal across six fetches.

What else to point them at. They hit different pools. Annie only sees legendary creatures, but she is free and always on. The Resonator sees any triggered ability you control, but costs {2} and a tap, once per turn cycle.

Annie's best non-Toph targets

Legendary creature	Doubled, it becomes
Kodama of the East Tree	Two free permanents out of your hand per permanent entering. Under Toph every artifact you cast is a permanent entering, so casting Sol Ring drops two more things free. The biggest one on the list.
Bumi, Unleashed	Two extra combat phases, and untaps all your lands twice. Often just lethal.
Toski, Bearer of Secrets	2 cards per creature that connects. Six attackers is 12 cards.
The Earth King	Twice as many basics fetched when power-4 creatures attack — twice the landfall.
Avatar Kyoshi	Earthbend 8 twice each combat, two separate targets, untapping both lands.
Toph, Hardheaded Teacher	Earthbend 2 per spell you cast instead of 1.
Toph, Earthbending Master	Two experience counters per land drop, so his attack earthbend grows twice as fast.

Strionic Resonator's best targets

These are the ones Annie cannot reach, ranked by what the copy is actually worth:

Trigger	The copy gives you
Kalonian Hydra attacks	It doubles counters on each creature you control, so copying it quadruples them. A board of 20/20 lands becomes 80/80 each, and Toph Greatest Earthbender's double strike counts that twice. Hold the Resonator for this.
Craterhoof Behemoth ETB	+X/+X twice, X being your creature count each time. With eight creatures that is +16/+16 to the board instead of +8/+8. Craterhoof is not legendary, so Annie never sees it — the Resonator is your only way to double it.
Avenger of Zendikar ETB	Double the Plants, one per land twice. Each Plant is also an Aura Shards trigger and a Kodama trigger.
Evolution Sage landfall	A second proliferate, which through the full counter stack is another 16 counters on every permanent you pick.
Aura Shards	Destroy two artifacts or enchantments off one creature entering.
Scute Swarm landfall	An extra copy of Scute Swarm once you are at six or more lands.
Terrasymbiosis	A second draw batch in a turn it has already fired.
Sylvan Library draw step	Two more cards on top of the two, at 4 life each to keep.

Not worth copying. The Ozolith — the bank is empty after the first move. Gift of Immortality — the creature is already back. Haywire Mite's death trigger is 2 life. Lotus Cobra is one mana. Spend the {2} on the Coffin instead.

With both out, Toph's end step gives you **THREE** instances, not four. Annie makes it trigger twice — two separate abilities on the stack — and the Resonator copies one of them. Same for Hardheaded Teacher and everything else Annie touches.

Every repeatable earthbend source

Source	Rate
Toph, the First Metalbender	Earthbend 2 at your end step, free
Toph, Hardheaded Teacher	Earthbend 1 per spell you cast, free — the highest volume source
Toph, Earthbending Master	Earthbend X per attack, X = your experience counters
Avatar Kyoshi, Earthbender	Earthbend 8 at each combat, then untaps that land
Ba Sing Se	{2}{G}, {T}: earthbend 2, sorcery speed, every turn

One-shots on top of that: Solid Ground, Earthbending Student, Badgermole Cub, Bumi Unleashed, Rockalanche, and the two Tophs' enter-the-battlefield triggers.

Bumi, Unleashed is the sleeper. Combat damage untaps all your lands and gives you an additional combat phase where only land creatures can attack. That re-triggers Toph Earthbending Master's attack earthbend and Avatar Kyoshi's combat trigger a second time — and Annie doubles both again.

The three loops

All three work the same way: earthbend it, use it up, earthbend returns it.

The Stasis Coffin — take zero damage every turn

"{2}, {T}, Exile The Stasis Coffin: You gain protection from everything until your next turn."

Exiling is part of the cost, so on its own it is one use. Under Toph it is a land, so earthbend it and the delayed trigger returns it from exile.

1. Your turn: the Coffin is earthbent from last end step and untapped.
2. Attack with everything. You do not need blockers.
3. Post-combat: {2}, tap, exile. It returns tapped. You gain protection.
4. Beginning of your end step: Toph's earthbend 2 re-arms it.
5. Opponents' turns: you take zero damage.
6. Your untap step: it untaps, already earthbent. Repeat.

What it does not stop: your creatures still die, life loss that is not damage, non-targeted effects ("each player sacrifices"), and your own permanents being destroyed. It protects you, not the board. Commander damage and infect are both damage, so both are prevented.

Ichor Wellspring — two cards a turn

"When this artifact enters or is put into a graveyard from the battlefield, draw a card." One trigger, two conditions, both fire every time.

Earthbend it, then sacrifice it to Zuran Orb (it is a land, so Zuran Orb can): draw 1 plus 2 life, earthbend returns it, it enters so draw 1 plus a landfall trigger. Re-earthbend at end step and repeat. **It must be earthbent before you sacrifice it**, or it stays in the graveyard and you are down a card.

Zuran Orb — a landfall engine, not a lifegain card

{0} to cast, free to activate, instant speed. Sacrifice an earthbent land: 2 life, it returns tapped, landfall trigger. Once per earthbend. Doubled by Traveling Chocobo. It is also the right response to a blocker that is about to die — you

keep the land and gain the life. **Only sacrifice things that are currently earthbent.** An un-earthbent artifact dies for good.

Counter math — always add before you double

Five cards modify counters as they are placed. They are replacement effects and **you** choose the order (CR 616.1).

Card	Effect	Applies to
Hardened Scales	+1	+1/+1 counters on a creature
Solid Ground	+1	+1/+1 counters on a permanent
Ozolith, the Shattered Spire	+1	+1/+1 counters on an artifact or creature
Branching Evolution	x2	+1/+1 counters on a creature
Doubling Season	x2	any counter type on a permanent, plus tokens

Earthbend 2 with all five out: **2 → 3 → 4 → 5 → 10 → 20**

Take the three plus-ones first, then both doublers. Reversing the order gives you 5 instead of 20.

- Only Doubling Season touches non-+1/+1 counters, so it is the one that doubles Twitching Doll's nest counters. Neither it nor the others touch experience counters, which sit on you, not a permanent.
- **Proliferate is affected by all five.** Evolution Sage proliferates on every land drop, and proliferate puts counters — so one proliferate on a creature that already has a counter becomes 16 through the full stack, on every permanent you choose at once.
- **Kalonian Hydra is not a sixth multiplier.** The five above modify counters as they are placed. Hydra doubles counters already on every creature you control when it attacks. Nothing else does that.

Twitching Doll — turning the counter pile into a board

"{T}: Add one mana of any colour. Put a nest counter on this creature."

"{T}, Sacrifice: Create a 2/2 green Spider with reach for each counter on it."

It says **each counter**, not each nest counter. So every +1/+1 counter earthbend put on it becomes a Spider. A Doll sitting on 20 counters cashes in for twenty 2/2 reach Spiders, forty with Doubling Season doubling the tokens. Sacrificing is dying, so earthbend returns the Doll to do it again. Every Spider entering is also an Aura Shards trigger.

Urza's Saga

Chapter II makes Constructs that get +1/+1 for each artifact you control, and you run 16. Chapter III finds a card with actual **mana cost** {0} or {1}, not mana value — your five legal targets are Zuran Orb, Ornithopter, Sol Ring, The Ozolith and Haywire Mite. Ozolith the Shattered Spire at {1}{G} does not qualify.

Earthbend it before chapter III resolves. The Saga sacrifices itself, sacrificing is dying, and earthbend returns it as a fresh object with zero lore counters. It restarts at chapter I. Without an earthbend on it, it is a land that deletes itself in three turns.

The earthbend-target bottleneck

Four cards want a target every turn. Toph gives you one, Annie two, Strionic Resonator three, Ba Sing Se a fourth for {2}{G}. Rank them by what you need that turn:

Spend it on	You get
The Stasis Coffin	Take zero damage until your next turn
Ichor Wellspring	2 cards

Spend it on	You get
Urza's Saga	Restart the Saga for another tutor and more Constructs
Ornithopter	A flying attacker that costs no mana to swing with

Card draw — what actually draws

Half your draw needs combat damage. Know which half.

Needs combat damage to a player

Card	Rate
Toski, Bearer of Secrets	per creature that connects
Ohran Frostfang	per creature that connects, and attackers gain deathtouch
Kutzil, Malamet Exemplar	once per player, batched — NOT per creature

Kutzil uses the "whenever one or more creatures" template, so six attackers into one opponent draws **one** card. It triggers separately per player, so a three-way alpha strike draws three. Its real value is the top line: **"your opponents can't cast spells during your turn"** — a Silence protecting every attack you make.

Toph, Greatest Earthbender gives land creatures DOUBLE STRIKE, which is two combat damage steps. All three of these trigger twice. Six land creatures with her out is twelve Toski cards in one combat.

Does not need combat

Card	Rate
Terrasymbiosis	Draw = counters placed, once per turn. Toph's free end step alone is 2
Sylvan Library	2 extra at your draw step, 4 life each to keep
Ichor Wellspring	2 per loop cycle
Garruk's Uprising	On a power-4 creature entering, not attacking

Garruk's draw is weaker than it looks. Earthbent lands do not trigger it — they were already on the battlefield and never "enter." Live triggers are Rampaging Baloths' Beasts, The Earth King's Bear, Kodama's drops, Bumi, Avatar Kyoshi, Craterhoof and Kalonian Hydra. Its trample clause is the main reason it is in the deck.

Removal and Aura Shards

Type	Cards
Artifact / enchantment	Haywire Mite, Chaos Warp, Beast Within, Aura Shards
Creature (spot)	Path to Exile, Swords to Plowshares, Beast Within, Chaos Warp, Annie Joins Up
Board wipe	Planar Outburst — the only one, and nothing can tutor it
Land	Strip Mine, Wasteland

Planar Outburst destroys all NONLAND creatures. Your earthbent lands are land creatures. They live, everyone else's board dies. It is a one-sided wrath in this deck.

Aura Shards destroys an artifact or enchantment whenever a creature you control enters. Avenger of Zendikar entering with eight lands is eight destroy triggers on one card. A Twitching Doll on twenty counters is twenty. Earthbent lands do not trigger it — a permanent already on the battlefield becoming a creature does not enter.

Protecting the board, and protecting Toph

These are two different problems and the deck is good at one of them.

Board protection — nine pieces

Card	Covers
Heroic Intervention	Hexproof and indestructible on ALL permanents, lands included
Flawless Maneuver	Free with a commander out; indestructible on creatures
The Stasis Coffin	Protection from everything, repeatable via the loop
Iroas, God of Victory	Prevents all damage to attackers; indestructible; not a creature, so it dodges creature removal
Akroma's Memorial	Protection from black and red, plus flying, first strike, vigilance, trample, haste
Lightning Greaves	Shroud — stops your own targeting too, unlike hexproof
Gift of Immortality	Recurs a creature — see the trap below
Kutzil	Opponents cannot cast spells during your turn
Earthbend itself	Every animated land returns from graveyard or exile

Cyclonic Rift overloaded barely touches you. It returns each nonland permanent. Under Toph your artifacts are lands and your earthbent lands are lands, so Sol Ring, Thran Dynamo, The Ozolith, Twitching Doll and Akroma's Memorial all stay. Toph herself is a creature and does get bounced.

The Gift of Immortality trap

The commander rule is a **may**: "if your commander would be put into a zone other than the stack or battlefield, you may put it into the command zone instead." Take that option and Toph never dies, Gift never triggers, and you pay +2 tax.

Decline the command zone and let her hit the graveyard. Gift returns her to the battlefield immediately, at no tax, and Gift itself comes back attached at the next end step. It recurs forever.

It does not cover exile. Swords to Plowshares and Path to Exile still get her, and only Heroic Intervention and Lightning Greaves stop those. **Two cards in 99 — the deck's biggest structural risk.**

How to play the deck

In order, every game.

1. **Deploy Toph as fast as possible.** Everything scales off her. Turn 3-4 is the target. You have eleven accelerants at two mana or less — 57% of opening sevens have one, 71% by turn three on the draw.
2. **Earthbend artifacts, not real lands.** Earthbend grants the land type itself, so an animated artifact survives Toph dying. Ornithopter first — it flies, and swinging with it costs you nothing because it makes no mana.
3. **Spread by default, concentrate to close.** Wide boards feed Toski and Ohran (per creature), The Earth King (per attacker) and Aura Shards (per token). One giant land is a single removal spell away from nothing.
4. **Hold up {2} if Strionic Resonator or The Stasis Coffin is out.** They compete for the same mana — you usually only afford one per turn.
5. **Alpha strike behind the Coffin.** Swing with everything, then exile it post-combat. You take zero damage until your next turn, so you never need blockers.

The kill turn

Concentration is the finish, not the build-up. When you are going for it:

- **Kalonian Hydra** attacks and doubles the counters already on every creature you control.
- **Toph, Greatest Earthbender** gives land creatures double strike, so every counter counts twice.
- **Craterhoof Behemoth** gives trample and +X/+X where X is your creature count.
- **Bumi Unleashed** connecting untaps all your lands and gives an extra combat with land creatures only.
- **Sphere Grid** means anything with a counter already has trample and reach.

Mulligan guide

34 land-capable cards in 99. 23.5% of opening sevens have 0-1 lands, 45.3% have three or more. A keepable hand is three lands, or two lands plus an accelerant — that is **64.5% of hands**.

- Mulligan hands with **no green source**. Green is 51 of your 68 pips.
- Mulligan hands with **no play before turn four**. Toph costs 4 and nothing works without her.
- **Remember the artifacts are not lands in your opening hand.** Before Toph resolves, Ornithopter is a 0/2 and Sol Ring is a mana rock. The 50 effective-land figure is a turn-six number.
- Planar Outburst at {3}{W}{W} is your only awkward cast — white is 15 sources.

Three things people get wrong at the table

- **Bouncing or tucking an earthbent land loses it permanently.** Earthbend only returns things from the graveyard or exile. Do not assume it is safe from everything.
- **Annie gives you two separate earthbends, not one bigger one.** Choose targets separately. You can split or stack.
- **Sacrificing an un-earthbent artifact to Zuran Orb kills it for good.** Earthbend first, always.

Appendix — Forge simulation results are a floor, not a rating

Recorded so no future simulation number is misread as a verdict on the deck. Across three matchups the Forge AI failed to cast Toph in **18%, 32% and 40%** of games. A diagnostic on the whiff games proved this is a **piloting failure, not a mana failure**:

Finding in the whiff games	What it rules out
13 of 16 ran six turns or longer	Not "the game ended too early"
81% had a red land on the battlefield	Not colour screw
One game had nine lands plus a Birds of Paradise idle for thirteen turns	Not mana at all
Logs showed Command Tower animated while three artifacts sat idle	Wrong earthbend targets — the rule above is artifacts first

This deck's power is almost entirely sequencing: which permanent to earthbend each end step, stacking Annie Joins Up with Strionic Resonator, running the Stasis Coffin loop, ordering the five counter-modifiers before the doublers. Forge does none of it. A deck that mostly attacks loses far less in translation, so head-to-head simulation numbers understate Toph specifically.

All card text verified against scryfall.db. Original guide Sept 21 2026; rebuilt Sept 28 2026 with the fetch package and simulation sections added. Bracket 3 confirmed against game_changers.md — three Game Changers: Aura Shards, Enlightened Tutor, Smothering Tithe.
